1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                 Eukaryota, Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalla; Eutheria; Primates; Catarrhini; Hominidae; Homo.

Determining the hormonal effects of substances, used to identify pharmaceuticals, e.g. for treatment of androgen receptor dysfunction, from modulating interaction between nuclear receptors and Ewing sarcoma

N-PSDB; ADS16277. WPI; 2004-627861/61.

Disclosure; SEQ ID NO 2; 30pp; German.

This invention relates to a novel modulators that alter the interaction between the Ewing sarcoma protein (EWS) and its nuclear receptor, as well as the screening method thereof. Specifically, it refers to determining and identifying a hormonal effect brought about by test compounds that modulate either the binding of EWS to the nuclear receptor or the ligand-induced activity of this receptor. The present invention describes the nuclear receptors as including oestrogen, progestorne, thyroid hormone, Vitamin D, and retinoic acid receptors, most preferably they are androgen receptors. Accordingly, these modulators may be used in the development of pharmaceutical compositions that can diagnose and be used to treat

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      diseases associated with receptor dysfunction such as prostatic cancer, alopecia, acne, hypogonadism and androgen-resistance syndrome e.g. testicular feminisation. This method provides reliable, sensitive, simple, inexpensive and rapid assessment of the hormonal effects of these test compounds. This polypeptide sequence is the human Ewing sarcoma protein of the invention.

New tumor-associated antigenic target polypeptides and nucleic acids, useful in preparing a medicament for treating or detecting a proliferative disorder, e.g. breast, lung, colorectal, ovarian or prostate cancer or tumor.

ID NO 5990; 7273pp; English.

The invention relates to human tumour-associated antigenic target (TAT) cc polypeptides, and their related nucleic acids. The TAT polypeptides are coverexpressed in cancer tissues compared to normal tissues, and may thus gerve as effective targets for the diagnosis and treatment of cancer in cc mammals. The invention also relates to nucleic acid and polypeptide ce gequences at least 80% identical to the TAT nucleic acids and compression vectors and host cells comprising a TAT nucleic cold; an antibody specific for a TAT polypeptide; a peptide or organic colorcule which binds to a TAT polypeptide; appetide or organic colorcule which binds to a TAT polypeptide; an acid may thus comprising a compression or cancer in mammals. TAT polypeptides, nucleic acids, cancer in mammals. TAT polypeptides, nucleic acids, contibodies, antagonists, binding molecules and compositions are useful concreased TAT expression, particularly cancers such as breast cancer, colorcetal cancer, lung cancer, ovarian cancer, liver cancer, bladder colorcetal cancer, melanoma and leukaemia. TAT nucleic acids may further be cused as hybridisation probes, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence cc crepresents a TAT polypeptide of the invention

The probes 22RR3 and 22RR12 were used to screen a human foetal brain cDNA library (Stratagene cat.# 936206). The clone BF1AC5 was identified and sequenced. It represents the entire coding region and 3'-UTR of the Ews
                                                                                                                                      New nucleic acid of EWS gene and its hybrid(s) - contg. gene sequence involved in chromosomal trans-location, also derived mRNA, probes, fusior proteins etc., for diagnosis and treatment of Ewing sarcoma and melanoma.
                                                                                                                                                                                                                                          WPI; 1993-386580/48.

It shows homology to a novel human transcriptional activity factor, Tat-stimulatory factor (Tat-SF1, see AAW33811), that is involved in the regulation of transcriptional elongation of HIV-1 by Tat, is essential for Tat trans-activation and is a substrate of an associated cellular kinase. Tat-SF can be used to screen for binding agents useful in the treatment of HIV infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acid encoding Tat stimulating factor protein and transformed cells - proteins and binding agents, used to immunodeficiency virus infection.

                                                                                                                       The invention relates to isolated polynucleotide (I) and polypeptide (II) creation (PCR) primers, oligomers, and for chromosome and gene mapping, comeation (PCR) primers, oligomers, and for chromosome and gene mapping, comed in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed comes. (I) is useful in gene therapy techniques to restore mormal comestivity of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to restore mormal complement. (II) and its binding partners are useful in medical imaging complement. (II) and its binding partners are useful in medical imaging complement. (II) and its binding partners are useful in medical imaging complymentials and polynucleotide sequences have applications in collypeptide and polynucleotide sequences have applications in collypeptide and polynucleotide sequences have applications in compositions, foremaics, gene mapping, identification of mutations compositions forematics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and cannot acid sequences of the invention. Note: The sequence data for this composition acid sequences of the invention. Note: The sequence data for this composition in the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          닭
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁

Examining the ischemic condition (e.g. occlusive ischemia) by measuring expression levels of particular genes defined in the specification or by determining the expression profile of a gene group comprising these

Claim 2; Page 799-802; 2690pp; English.

The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (1) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (1). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AB199202 to AB19912, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition-improving drugs or therapeutics for ischaemic diseases. AB199913 and AB199914 represent PCR primers for a mouse ischaemic condition related sequence, which are used in the condition is the condition are used in the condition are used to the condition related sequence, which are used in the condition related sequence, which are used the condition related sequence, which are used to the condition related sequence, which are used the condition related sequence. in the exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 14; SEQ ID NO 2713; 205pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases which the gene is involved, or as target molecules for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cytostatic; Anti-inflammatory; Osteopathic; Neuroprotective; Nootropic; Gene Therapy; human; secretory protein; membrane proteins; cancer; inflammatory disease; osteoporosis; neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human protein,

CC molecules and the encoded proteins thereof. Specifically, it refers to CC cDNA clones obtained by an oligo-capping method, where none of these CC clones are identical to any known human mRNAs. The present invention; ... CC describes an immunoassay to identify agonists and antagonists, as well as CC antibodies, antisense molecules and siRNAs that can all be used to bind CC to and modulate expression of the cDNA molecules. As such, these CC molecules are useful for diagnostic markers or therapeutic targets for CC the various diseases or morbid states. In particular, they are useful in CC gene therapy for treating osteoporosis, neurological disease, Alzheimer's CC disease, Parkinson's disease, dementia, short memory and various cancers, CC as well as for maintaining equilibrium of sense or motor function, and CC for treating emotional reaction, fear response and panic. Accordingly, CC they exhibit osteopathic, neuroprotective, noutropic, antiparkinsonian, CC cytostatic and tranquiliser activities. This polypeptide is a protein CC encoded by a full length human cDNA sequence of the invention. NOTE: This sequence is not given in the sequence listing of the specification but CC can be obtained on CD-ROM from the European Patent Office, Vienna Sub-

The present invention describes an isolated PRO nucleic acid (I). Also CC described: (I) a vector comprising (I); (2) a host cell comprising the CC vector of (I); (3) a process for producing a PRO polypeptides; (4) an CC isolated PRO polypeptide; (5) a chimeric molecule comprising the CC polypeptide of (4) fused to a heterologous amino acid sequence; (6) an CC antibody which specifically binds to a polypeptide of (4); (7) a CC composition of matter comprising a polypeptide of (4), an agonist or CC polypeptide in combination with a carrier; (8) an article of manufacture comprising a container, a label on the container and a composition of CC matter of (7); (9) a method of treating an immune related disease in a CC mammal; (10) a method for determining the presence of a PRO polypeptide CC in a sample suspected of having the polypeptide; (11) a method of identifying a compound that inhibits or CC mimics the activity of or expression of a gene encoding a PRO polypeptide CC antiatsthmatic, antidlabetic, antiinflammatory, antiarchitic, CC antiatsthmatic, antidlabetic, antiantallari, antiantallari, compound that inhibits or CC insphrotropic, neuroprotective, osteopathic, respiratory, vasorropic and CC virucide activity end can be used in gene therapy. The nucleic acid CC virucide activities, and can be used in gene therapy. The nucleic acid CC virucide activities, and can be used in gene therapy. The nucleic acid CC virucide activities, and can be used in gene therapy. The nucleic acid CC virucide activities, and can be used in gene therapy. The nucleic acid CC virucide activities, and can be used in gene therapy. The nucleic acid CC virucide activities or compositions, kits and methods are CC virucide of the polypeptides. The present sequence represents a human CCC protein from the present invention. The invention relates to human tumour-associated antigenic target (TAT) CC polypeptides, and their related nucleic acids. The TAT polypeptides are coverexpressed in cancer tissues compared to normal tissues, and may thus CC serve as effective targets for the diagnosis and treatment of cancer in C mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and codypeptide; expression vectors and host cells comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; fusion proteins comprising a CC molecule which binds to a TAT polypeptide; fusion proteins comprising a CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids and CC antibodies, antagonists, binding molecules and compositions are useful CC increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder CC cancer, pancreatic cancer, cervical cancer, cancers of the central CC cancer, pancreatic cancer, cervical cancer, cancers of the central CC cancer, pancreatic cancer, cervical cancer, cancers of the central CC cancer, pancreatic cancer, cervical cancer, cancers of the central CC cancer, pancreatic cancer, cervical cancer, cancers of the central CC cancer, pancreatic cancer, cervical cancer, cancers of the central CC cancer as hybridisation probes, in chromosome and gene mapping, in CC chromosome identification and in gene therapy. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New tumor-associated antigenic target polypeptides and nucleic acids, useful in preparing a medicament for treating or detecting a proliferative disorder, e.g. breast, lung, colorectal, ovarian or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ę

CC The invention describes a method of treating genetically-defined disease CC associated with chromosomal abscrations yielding oncogenic fusion proteins (I), treating cancerous cells containing (I) in a heterogeneous cell population, treating proliferative diseases associated with mutant protein or cellular protein isoforms (II) dependent on heat shock protein (HSP)-90, or selectively treating cells expressing (II) involving CC daministering HSP90-inhibitor. The method is useful for treating concogenic fusion protein, treating centerous cells containing fusion or concogenic fusion protein, treating cancerous cells containing fusion or concogenic fusion protein, treating cancerous cells containing fusion or cellular protein isoform dependent on heat shock protein (HSP)-90 (e.g. rheumatoid arthritis or cancer) associated with mutant protein or cellular protein isoform dependent on heat shock protein (HSP)-90 (e.g. CC protein isoform in a patient heterozygous for (II). The method is useful for treating a disease e.g. haematopoictic disorder such as T or B cell (T protein soform a disease e.g. haematopoictic disorder such as T or B cell (T protein) are characterised by a solid tumour such as papillary thyroid corrections. Ewing's sarcoma, melanoma, liposarcoma, rhabdomyosarcoma and corrections. This represents a protein encoded by the DNA sequence of a chromosome aberration
                                                                                                                                                  Query Match

             The present sequence represents a chimeric human Ewing's sarcoma (EWS)-WT1 protein. EWS is also known as peripheral neuroectodermal tumour (PNET). The protein is composed of EWS and WT1 proteins (see features table). The WT1 gene encodes 4 alternatively spliced RNA transcripts that produce functionally different products. One alternative splice site is at the 3' end of exon 9 and leads to products that differ by 3 amino acids placed between the third and fourth zinc fingers of the DNA binding domain. The present protein does not contain these three amino acids (Lys, Thr, Ser), while AAM34971 does. Detection of EWS-WT1 can be accomplished by reverse transcriptage PCR, where WT1 is screened (see

The method comprises detecting a nucleic acid molecule encoding a chimeric EWS-WT1 protein in a sample from the subject, where positive detection indicates the presence of a DSRC tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                tumour, which shares some histopathologic features of desmoplastic small round cell (DSRC) tumours. The EWS-WT1 chimeric transcript has been detected in 11 out of 12 DSRC tumours studied and in none of 49 other tumours. DSRC tumours are associated with translocation of the EWS gene.

Diagnosis of desmoplastic small round cell tumours - acid encoding chimeric EWS-WT1 protein. by detecting nucleic

Disclosure; Col 37-40; 34pp; English

The present sequence represents a chimeric human Ewing's sarcoma (EWS)-CC (WTI) protein. EWS is also known as peripheral neuroectodermal tumour (CC (PNET)). The protein is composed of EWS and WTI proteins (see features table). The WTI gene encodes 4 alternatively spliced RNA transcripts that produce functionally different products. One alternative splice site is at the 3' end of exon 9 and leads to products that differ by 3 amino caids placed between the third and fourth zinc fingers of the DNA binding domain. The present protein contains these three amino acids (Lys, Thr, Ser), while AAW34972 does not. Detection of EWS-WTI can be accomplished by reverse transcriptase PCR, where WTI is screened (see AAT97852-68) as a breakpoint locus because of its involvement in Wilms' tumour, which shares some histopathologic features of desmoplastic small round cell (DSRC) tumours. The EWS-WTI chimeric transcript has been detected in 11 out of 12 DSRC tumours studied and in none of 49 other tumours. DSRC tumours are associated with translocation of the EWS gene.

CO disjonucleotides based on the AAT97869 are used in a method for the CO diagnosis of DSRC tumours in patients. The method comprises detecting a nucleic acid molecule encoding a chimeric EWS-WTI protein in a sample from the subject, where positive detection indicates the presence of a from the subject, where positive detection indicates the presence of a

                                                                       ঠ
                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a purified protein promoting signal transducer CC and activator of transcription 6 activation (STAT6). The protein is cuseful for the producing an antibody, which involves administering the CC useful for the spitope-bearing fragments to a non-human animal as an activation. The nucleic acid is useful for diagnosing a disease or CC antigen. The nucleic acid is useful for diagnosing a disease or CC antigen. A transformant expressing the protein is useful for screening CC compounds which inhibit or promote STAT6 activation. A transformant CC expressing the protein is useful for producing a pharmaceutical CC composition. Compositions, antibodies and antisense molecules are useful CC for the treating a disease associated with STAT6 activation such as allergic diseases, inflammation, autoimune diseases, diabetes, CC hyperlipidaemia, infections disease and cancers. Compositions are useful CC for treating disease associated with STAT6 activation and/or prevention CC arthritis, osteoarthritis, systemic lupus erythematosus, sepsis, asthma, CC allergic rhinitis, ischaemic heart diseases, subarachnoid haemorrhage, crimal hepatitis and AIDS. The protein has efficient promoting STAT6 cativation or inhibition of STAT6. The present sequence represents the activation or inhibition of STAT6. The present sequence represents the cc acid acid sequence of a human protein which promotes STAT6 activation.
                                                                                                                                                                                                                                                                                                                                                       Query Match

```
Nucleic acids encoding polypeptides with cytokine-like activities, useful in diagnosis and gene therapy.
   Claim
20; Page 3253-3254; 6221pp; English.
```

The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM73823-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor|activity, haematopolesis regulating activity, tissue growth factor activity, inmunomodulatory activity and activity/inhibin activity and 'may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system discorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication

     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                           3633

Sequence 10914, Application US/09949016

Patent NO. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASS

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF

PILE REPERENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR FILING DATE: 2000-10-20
                                                                                                                                                                                         RESULT 4

Sequence 78.5, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THER

FILE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/231,768

PRIOR PILING DATE: 2000-10-03

PRIOR PILING DATE: 2000-09-08

PRIOR PILING DATE: 2000-09-08

PRIOR PILING DATE: 2000-09-08

PRIOR FILING DATE: 2000-09-08

PRIOR FILING DATE: 2000-09-08

PRIOR FILING DATE: 2000-09-08
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ક
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              문
